BACKGROUND:

OxiRed, which has been marketed under the name Amplex Red™ reagent, is a highly sensitive and stable probe for H₂O₂, is a fluorogenic (EX/EM = 535/587 nm) and Colorimetric (λ = 570 nm) substrate for peroxidase. In the presence of horseradish peroxidase (HRP), the OxiRed probe reacts in a 1:1 stoichiometry with H₂O₂ to produce highly fluorescent resorufin. Because H₂O₂ is produced in many different enzymatic reactions, the OxiRed probe allows researchers to detect the activity of many different enzymes either colorimetrically or fluorometrically.

CAUTION: Do not ingest, swallow, or inhale. Do not get in eyes or on skin. Care should be taken to prevent contact through all routes of exposure.

For Research Use Only! Not to be used in humans.
